

Dear Garrett,

This graph accurately depicts the amount of load, wind generation, hydro generation, fossil/biomass generation and nuclear generation in the Bonneville Power Administration from March 18, 2021 to March 24, 2021. The data depicted in the graph uploaded in real time every five minutes through that period.

This represents loads and resources in BPA's Balancing Authority (BA) including some that are not BPA's. It does not include BPA loads served by transfer, scheduled out of region, or scheduled to customers with their own BAs such as Seattle and Tacoma

Sincerely,

Bart McManus
Electrical Engineer
Bonneville Power Administration
